

BOARD AGENDA ITEM

DECEMBER 8, 2020

SUBJECT:

Board Room audio-visual upgrade through the purchase and installation of live-streaming equipment and a technical support contract.

BACKGROUND INFORMATION:

The Board of Education Communications Committee achieved one of its primary goals in July when board meetings began to be streamed live on the Internet. This has increased the outreach of board meetings and information exponentially, with livestreamed meetings having already accumulated over 85,000 views. Meetings are being livestreamed currently with a cell phone and microphone. The committee wishes to enhance the audio-visual quality of our livestreamed meetings through an upgrade of our current equipment. This action would significantly increase the quality of our broadcasts and provide a better online experience for stakeholders.

RECOMMENDATION:

Approve the issuance of a Request For Proposals (RFP) to upgrade the board room's audio-visual capabilities, install live-streaming equipment, and provide technical support for future board meetings.
